

- **Ring Road Study**

- D. Smyth reported that Dr. Margot Mandy and her CHEM 302 class recently completed a study to estimate the reduction of CO2 emissions that would result from returning the Ring Road to its original two-way traffic pattern. The study estimates that this 16.5 tonnes reduction is conservative since travel on the Ring Road in evenings and weekend was not included.
- K. Aben expressed his thoughts that the report was very well done and up to par with a professional study on GHG emissions
- K. Wilkening asked who had the final authority for changing the direction of Ring Road
- E. Bray responded that it would be Patrrtr

- d as one of the
priority areas
- not something that the GUPC should be responsible for
- A. Fredeen noted the challenge that he recognizes as a pension trustee that
